

Global email notification preferences

 Last updated on March 11, 2025 at 8:23 AM

Feature release date

19 January 2024

What's new?

We have now introduced global email notification preferences under **Settings -> Global settings**.

This allows users with the Super Administrator or Administrator role to toggle off specific email notifications from File Governance for all users in their organization. The individual users can overrule these global settings in their own user profile pages if they want to.

Email notifications

- ☒ My Drive cleanup list warning email
- ☒ Files have been unshared from My Drive
- ☒ Shared drive cleanup list warning email

Why have we done this?

We continue to bring more tools to the hands of the administrator roles in File Governance.

Being in control of what types of notifications your organization's users receive can be very useful - especially in large organizations - and has been requested by our customers. These global settings complement the personal email preferences that we released last year.
